Oilseeds: World Markets and Trade

South American Soybean and Soybean Meal Exports to Increase

Change from Last Month's 2001/02 Export Forecasts

(September 2001 forecast subtracted from October 2001 forecast.)

Global soybean and soybean meal exports estimates for 2001/02 were increased by 1,773 and 558 thousand tons respectively this month. The estimates of U.S. soybean and soybean meal exports were reduced due to increased competition from Brazil and Argentina. If these estimates materialize, combined South American (Brazil, Argentina, and Paraguay) soybean exports in 2001/02 will be larger than those of the United States for the first time in history. Estimated soybean production for 2001/02 was increased for Brazil, Argentina and the United States. South American production was increased 5.1 percent this month to 71.9 million tons, and U.S. production was increased by 2.6 percent to 79.1 million tons. The increase in Brazilian production is mostly due to an increase in area that is partly caused by producers switching into soybean production and out of cotton and corn production. Larger South American exports are expected to partly displace U.S. exports. Much of the increased soybean trade is going to the European Union, where estimated 2001/02 soybean imports were raised 600 thousand tons. Global soybean ending stocks are expected to reach 29.0 million tons, up from 26.2 million tons last month and estimated 2000/01 ending stocks of 28.5 million tons. Projected U.S. soybean ending stocks were increased by almost 2.5 million tons to 9.4 million tons.

Situation and Outlook

The forecast for world oilseed production rose 5.2 million tons for October to more than 321 million tons. Small declines in the expected production of cottonseed, peanut, and rapeseed were more than offset by the 5.2-million-ton jump in soybean production, and to a lesser extent, the 150,000-ton increase in palm kernel output. Brazil's production of soybeans is expected to rise 2.5 million tons to 41.5 million, while Argentina's soybean crop is now expected to reach 27 million tons, 1 million higher than the previous estimate. US production is expected to rise 2 million tons to a record 79.1 million tons.

Exports of major oilseeds are expected to rise 1.8 million tons to just over 70 million tons. Except for some minor adjustments to the rapeseed, peanut, cottonseed and sunflowerseed estimates, virtually all of the increase is attributable to soybean exports, which are expected to rise to 57.3 million tons from 55.5 million last month. The forecast for US soybean exports is 272,000 tons lower, while Brazilian and Argentinian exports are projected 1.75 million and 500,000 higher respectively.

The worldwide crush of oilseeds rose 2.2 million tons this month, mirroring the pattern of production, where palm kernel and soybean crush represented most of the added crush, rising 150,000 tons and 2.0 million tons respectively. Significant increases in soybean crush are expected in the EU, up 765,000 tons, Brazil, up 500,000, and Argentina, up 300,000. The crush of soybeans in the US remained the same as domestic meal use increased and offset a weakening of expected exports.

Soybean stocks worldwide rose nearly 2.9 million tons to 29 million tons. Most of the increase came in US stocks, which rose a dramatic 2.5 million tons to 9.4 million tons. Brazilian stocks rose a more modest 150,000 tons, and Argentina posted a 200,000-ton rise, both reflecting their propensity to export a large share of any increased production. The change in US stocks reflects an adjustment to carry in stocks, higher production estimates, as well as weaker exports. The higher soybean stocks put downward pressure on prices, causing a fall in the estimated price range from \$4.40-\$5.40 per bushel to \$3.90-\$4.70 per bushel.

Edible oil production is expected to rise 256,000 tons to a record 90.6 million. The 400,000 ton rise in soybean oil more than offsets declines of 100,000 tons of palm oil, and smaller reductions in sunflowerseed oil and cottonseed oil. Exports of edible oils are expected to decline 100,000 tons leading to a slight increase in ending stocks as domestic consumption rises less than the increase in available oils.

Notes on World Supply/Demand Tables

- 1) Trade, crush, consumption, and stocks data are aggregated using individual marketing years with the exception of Argentina and Brazil. These two countries are converted to an October-September basis. Marketing years for countries in the Northern Hemisphere begin in the first year shown. Those in the Southern Hemisphere begin in the second year.
- 2) World imports and exports will not balance. This is due to differences in marketing years and time lags between exportation and importation.
- 3) Stocks data are not estimated for all countries.
- 4) Price averages are dollars per bushel for soybeans, dollars per short ton for soybean meal and cents per pound for soybean oil.

Regional area and country designations in the soybean, soybean meal, and soybean oil supply, distribution, and trade tables are as follows:

Africa, North	Baltic States	FSU-12	Middle East
Algeria	Estonia	Armenia	Cyprus
Egypt	Latvia	Azerbaijan	Iran
Libya	Lithuania	Byelorussia	Iraq
Morocco		Georgia	Israel
Tunisia	Europe, Eastern	Kazakhstan	Jordan
